

E-FASHION AND TAILORING MANAGEMENT

SYSTEM:-

ABSTRACT:-

The project is entitled "*E-fashion and tailoring management system*" it is a well prepared project. This is an online and offline system. The basic idea is that the customer can buy products through online and also altering .This project is aimed to automate the tailoring sector and also purchase materials which is manually maintained. The system for fashion and tailoring shop web application is intended to provide a complete solutions for vendors and customers through a single gate way using the internet without visiting the shop physically. Once logged a customer can make order and check dress status and give feedback. This site is also provide free shipping or delivery. If we want to stich any material,then we entered to the site and make an order for stiching then the tailor will reach you and take measurements and stich it comfortable to you and delivered within the time. After this automation this will mean a better services and a good keeping of records, data integrity,data security,quick search and also papperless environment. Customer measurement is either online or offline process.
